Figure 1 displays four maps of the Republic of Serbia, showing the spatial distribution of COVID-19 cases by administrative region for four specific dates in 2021. The maps are arranged in a 4x4 grid, with the date of the data collection indicated in the top right corner of each map: 2021 8 23 9, 2021 10 18 9, 2021 10 28 9, and 2021 11 26 9. The maps illustrate the progression of the pandemic over time, showing the spread of cases from the north and west towards the south and east. The legend indicates the number of cases per administrative region, with colors representing different ranges: 0 (white), 1-4 (light blue), 5-9 (medium blue), 10-14 (dark blue), 15-19 (very dark blue), 20-24 (black), and 25+ (white with black border). The maps show a clear trend of increasing case numbers over time, with the highest concentrations of cases appearing in the central and southern regions by the final date shown.
